PRETTAU® ANTERIOR

INCREASE YOUR PRICE WITH PRETTAU® ANTERIOR

Transparency combined with high flexural strength! The new zirconia material has been specifically developed for anterior tooth restorations, but is just as well suited for posterior areas. Prettau® Anterior can be milled dry with regular zirconia burs and therefore offers an ideal alternative to lithium disilicate!

- Double the flexural strength compared to lithium disilicate: 670 MPa (School of Dental Medicine, University of Pennsylvania)
- Excellent aesthetic properties
- Higher transparency allows perfect light transmission and good background masking
- Extra resistant to ageing
- Suitable for fully anatomical contours or framework for ceramic veneering
- Shorter sinter times due to sintering at 1500 °C
- Available in various block sizes
- Indications: metal-free partial and individual crowns, inlays, onlays, veneers, 3-unit bridges (max).
